

POTENTIAL HAZARDOUS WASTE SITE  
IDENTIFICATION AND PRELIMINARY ASSESSMENT

REGION SITE NUMBER (to be assigned by HQ)  
6 TX 109/9

3/13/84

NOTE: This form is completed for each potential hazardous waste site to help set priorities for site inspection. The information submitted on this form is based on available records and may be updated on subsequent forms as a result of additional inquiries and on-site inspections.

GENERAL INSTRUCTIONS: Complete Sections I and III through X as completely as possible before Section II (Preliminary Assessment). File this form in the Regional Hazardous Waste Log File and submit a copy to: U.S. Environmental Protection Agency; Site Tracking System; Hazardous Waste Enforcement Task Force (EN-333); 401 M St., SW; Washington, DC 20460.

#### E. SPECIFY DETAILS OF SITE ACTIVITIES AS NEEDED

SFN indicated that two disposal pits for leaded tank bottoms and one landfill were used from 1923 to 1973 and 1969, respectively. The facilities have been closed but are now covered by an active 31-acre disposal pond (depth 5-1/2 feet). The TDWR SW Registration indicates that wastes disposed at the active pond include Class I (see Attachment A)

#### V. WASTE RELATED INFORMATION

##### A. WASTE TYPE

1. UNKNOWN     2. LIQUID     3. SOLID     4. SLUDGE     5. GAS

##### B. WASTE CHARACTERISTICS

1. UNKNOWN     2. CORROSIVE     3. IGNITABLE     4. RADIOACTIVE     5. HIGHLY VOLATILE  
 6. TOXIC     7. REACTIVE     8. INERT     9. FLAMMABLE

10. OTHER (specify): Weathered (rendered inorganic) leaded tank bottom sludge

##### C. WASTE CATEGORIES

1. Are records of wastes available? Specify items such as manifests, inventories, etc. below.

TDWR Part A application indicated quantities.

2. Estimate the amount(specify unit of measure) of wastes by category; mark 'X' to indicate which wastes are present.

POTENTIAL HAZARDOUS WASTE SITE  
IDENTIFICATION AND PRELIMINARY ASSESSMENT SUPPLEMENT SHEET

Instruction - This sheet is provided to give additional information in explanation of a question on the form T2070-2.

Corresponding number on form	Additional Remark and/or Explanation
III-A	Plant is active but disposal sites identified on SFN are inactive.
IV-E	wastes (API Separator sludge, slop oil emulsion solids, spent treating clay, spent catalyst) and Class III wastes. The TDWR Part A application (1980) reported that the active site contains approximately 675,000,000 lbs of sludge. The Part A also indicated that the inactive landfill contained 1,090,000 lbs of asbestos and 3,225,000 lbs of spent polycatalyst (D002 or D003) in 67,000,000 lbs of total wastes, and the inactive disposal pits contained 1,020,000 lbs of weathered TEL sludge (K052). Closure plans at the subject site include landfarming all sludge from the active 31-acre disposal pond.
	The site is bounded to the north by the Neches River and surrounded by other refineries. Hydrogeologic data in the file indicated that thick deposits of clay underlie the site. Groundwater monitoring wells are in place around the active disposal pond (since 1981) under RCRA guidelines, and data in the file indicated that as of September 1982, no parameters except turbidity had exceeded drinking water standards. However, file records also show that the wells are screened through two or three aquifers, allowing for the possibility of dilution of contaminants present in the uppermost aquifer. TDWR and EPA have approved the GW monitoring system based on the belief that statistical differences in quality between new and background data will be detected even with dilution.
	The plant is subject to annual SW disposal compliance monitoring inspections by TDWR. A windshield survey of 12/27/83 revealed no new information because of limited access.
	A site inspection is recommended to further review plant records regarding the inactive disposal facilities and to determine the current status of groundwater quality in the area.
